Installation   📚 Blog

General Steps

These are the steps required to install Leantime. They work for most configurations.

- Download latest release package
- Create an empty MySQL database
- Upload entire directory to your server
- Point your domain to the `public/` directory
- Rename `config/configuration.sample.php` to `config/configuration.php`
- Fill in your database credentials (username, password, host, dbname) in `config/configuration.php`
- Navigate to `<yourdomain.com>/install`
- Follow instructions to install database and set up first user account
